                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   3
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ò
                                                                                                                            The present sequence represents a beta-amyloid peptide binding protein (BBP). The polynucleotide comprising the entire BBP nucleotide sequence of clone BBP1-Ii is deposited under the accession number ATCC 98617. The polynucleotide comprising a fragment of BBP (nucleotides 202-807 of the full length BBP) of clone pEK196 is deposited as ATCC 98395. Host cells transformed with a vector comprising the BBP nucleic acid are used for the recombinant production of the protein. The protein can be used in a method for diagnosing a disease characterised by aberrant expression of human beta-amyloid protein (BAP). The protein can also be used in a method for screening for compounds which regulate expression of a BAP binding protein. The proteins, antibodies and identified compounds can be used in the treatment or prevention of Alzheimer's disease.

The present sequence is the beta-amyloid peptide (BAP) binding protein-1 (BBP1). It is an integral membrane protein, that traverse the membrane twice. It is related to G protein-coupled receptor (GPCR) protein superfamily. It interacts with G-alpha proteins and regulates the activity of G-protein signalling pathways. BBP genes are widely expressed in neuronal cells of nonhuman primate (NHP) brain and overexpressed in some tumours. It functions as a suppressor of apoptosis induction. BBP proteins are used as immunogens to raise antibodies, useful as therapeutics and as antigens in solid phase assays. They are also useful as reagents to identify molecules which effect the interaction of BBP and a cloned protein, that are useful in the treatment or prevention of diseases, associated with apoptosis. The polynucleotides are useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              SKMAAAWPSGPSAPFAVTARLVGVLWFVSVTTGPWGAVATSAGGEESLKGEDLKVGQY1C 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             KDPKINDAT@EPVNCTNYTAHVSCFPAPNITCKDSSGNETHFTGNEVGFFKPISCRNVNG 180

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Note: In claim 5, the patent claims an amino acid sequence from figure 2. However, figure 2 does not contain any sequence. It is inferred from the disclosure that the figure 2 sequence refers to BBP1 protein, shown in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1 MHILKGSPNVIPRAHGOKNTRRDGTGLYPMRGPFKNLALLPFSLPLLGGGGSGSGKVSV

                                                                                                                                                                                                                                                                                                                                               The present invention relates to novel human beta-amyloid peptide (BAP) Abeta, betaAP)-binding (BBP) proteins and polynucicchides encoding such proteins. BBP sequences are useful to diagnose and/or treat diseases associated with aberrant expression of human BAP such as Alzheimer's disease (AD). They are used to generate transgenic animals. Sequences of the invention are also used in gene therapy. The present sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New human beta-amyloid peptide-binding protein, useful for diagnosing and/or treating diseases associated with aberrant expression of beta-amyloid peptide, e.g. Alzheimer's disease

can also be used for producing secreted proteins, and encode the proteins given in AAY1261 to have secreted proteins, and encode the proteins given in AAY1261 to AAY12514, respectively. The proteins given represent the signal peptide and an N-terminal fragment of a secreted protein. The nucloic acid sequences can be used for producing secreted human gene products. They can also be used to develop products for diagnosis and therapy. The proliferation/differentiation activity, heam topologis regulating activity, chemication activity, heam topologis regulating activity, chemicatoric/chemokinetic activity, anti-inflammatory activity, tumour inhibition activity or other activity, anti-inflammatory activity, tumour inhibition activity or other activity anti-inflammatory activity, tumour inhibition activity or other activities. The products can be used in forensic, gene therapy and chromosome mapping procedures. The sequences can also be used for obtaining corresponding promoter sequences. The nucleic acids encoding the signal peptide can be used for directing extracellular secretion of a polypeptide or the inscript of a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                63 MAAAWPSGPSAPEAVTARLVGVLWFVSVTTGPWGAVATSAGGEESLKCEDLKVGQYICKD 1223

                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This sequence is encoded by an extended human secreted protein coding sequence of the invention. The secreted proteins can be used in treating or controlling a variety of human conditions. The secreted proteins may act as cytokines or may affect cellular proliferation or differentiation or may act as immune system regulators, haematopolesis regulators, tissue growth regulators, regulators of reproductive hormones or cell movement or have chemotactic/chemokinetic, receptor/ligand, anti-inflammatory or tumour inhibition activity. The DNAs can be used in forensic procedures to identify individuals or in diagnostic procedures to identify individuals or in diagnostic procedures to identify the genes corresponding to the extended colons. They are also useful for constructing a high resolution map of the human chromosomes. They can also be used for gene therapy to control or treat genetic diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     63 MAAAWPSGPSAPEAVIARLVGVLWFVSVTTGPWGAVATSAGGEESLKCEDLKVGQYICKD 122

The proteins given represent the signal peptide and an N-terminal fragment of a secreted protein. The nucleic acid sequences can be used for producing secreted human gene products. They proteins obtained may have cytokine activity, cell proliferation/differentiation activity, haematopolesis regulating activity, tissue growth regulating activity, haematopolesis regulating activity, receptor/ ligand activity, anti-inflammatory activity, tumour inhibition activity or other activity anti-inflammatory
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               can be used in forensic, gene therapy and chromosome mapping procedures. The sequences can also be used for obtaining corresponding promoter sequences. The nucleic acids encoding the signal peptide can be used for directing extracellular secretion of a polypeptide or the insertion of a polypeptide into a membrane, or importing a polypeptide into a cell.
                                                                                                                                                                       forensic; gene therapy; chromosome mapping; signal peptide; upstream regulatory sequence; cytokine activity; cell proliferation; differentiation; haematopolesis regulation; tissue growth regulation; reproductive hormone regulation; chemotactic; chemokinetic; haemostatic; thirombolytic; anti-inflammatory; tumour inhibition.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    63 MAAAWPSGPSAPEAVTARLVGVLWFVSVTTGPWGAVATSAGGEESIKCEDLKVGQYICKD

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signaling and coll-ceil interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaccutical drugs. The invention discloses genomic DNA sequences (ABL16175-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins. The invention the sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at fip.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        SLKCEDLK-VGQYICKDP---KINDATQEPVNCTNY-TAHVSCFPAPNITCKDSSGNETH 161
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   221
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             polypeptide-RNA polymerase II subunit il protein. The invention also comprisses a process for preparing the polypeptide of the invention by DNA recombination, the application of the polypeptide in treating diseases such as cancer, human immunodeficiency virus (HIV) infection, etc., the antagonist of the polypeptide and its medical action, and the application of the said polynuclectide are disclosed. The present sequence represents the RNA polymerase II subunit II protein of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Polypeptide-RNA polymerase II subunit 11 and polynucleotide for coding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps

                                                                                                                                                                                                                                                                              The present invention relates to novel human secreted proteins (ABR47633-ABR40145) and their coding sequences (ACC50344-ACC50856). The proteins and their coding sequences are useful for the preparation of a diagnostic or pharmaceutical composition for diagnosing or treating a cardiovascular disorder (e.g., arrhythmia, tachycardia, cardiac arrest, coronary arteriosclerosis and myocardial ischamnia), neural disorders, immune system disorders, muscular disorders, reproductive disorders, gastrointestinal disorders und/or cancercus diseases and conditions, for proliferative disorders and/or cancercus diseases and conditions, for whound healing and epithelial cell proliferation, to treat inflammation or infection, for treating thrombosis and arteriosclerosis, for preventing neural damage which occurs in neuronal disorders or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        135 CTNYIA--HVSC----FPAPNITCKDSSGNETHFTGNEVGFFKPISCRNVNGYSYKVAVA 188
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         neurodegenerative conditions such as Alzheimer's disease and Parkinson's disease, to enhance bone and periodontal regeneration and aid in tissue stransplants or bone grafts, to prevent skin aging or hair loss, to stimulate growth and differentiation of haematopoietic cells and bone marrow cells when used in combination with other cytokines, to maintain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            organs before transplantation or for supporting ceil culture of primary tissues, to increase or decrease differentiation or proliferation of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Human: secreted protein; digestive disorder; gastrointestinal disorder; mouth; oesophagus; stomach; small intestine; large intestine; liver; billary tract; pancreas; cancer; tumour; hyperproilferative disorder;

protein genes, and AbP00011-ABP00299 represent the proteins they encode.

Charaty-Assals 1540 represent thuman secreted proteins they encode.

ABZ11479-ABZ1540 represent thuman secreted proteins they encode.

Charaty-Assals 1540 represent thuman secreted proteins they encode.

Convention also encompasses antibodies specific for the secreted proteins. The secreted proteins in drug screening, and recombinant vectors and host cells comprising a nucleic acid of the invention. The secreted proteins, nucleic acids encoding them, antibodies or antibody fragments specific for the secreted proteins, and modulators of protein activity are useful for diagnosing, treating, amelicarating or preventing dispessive disporders. Such conditions include disporders of the mouth, cesophagus, stomach, small intestine, large intestine, liver, biliary tract and pancreas, and include cancers of these organs and tissues. The creatment of immune disporders, and to promote wound healing. Nucleic acid: hyperproliferative disorders, and to promote wound healing. Nucleic acid: hyperproliferative disorders, and to promote wound healing. Nucleic acid: of the invention may be used for chromosome identification, chromosome condapping, in gene therapy, for identifying individuals from minute to bological samples, as hybridisation probes, and as molecular weight invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ...

This sequence represents a secreted human protein encoded by the generate fusion proteins by linking to the gene to a human immunoglobulin for portion (e.g. AAX84924) for increasing the stability of the fused protein as compared to the human protein only.

The invention relates to 125 novel genes and their fragments (mucleic acid sequences: AAX84933.X85057; amino acid sequences AAX97567-Y27933; which are useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. Also, pathological conditions can be diagnosed by determining the amount of the new polypoptides in a sample or by determining the presence of mutations in the new polymucleotides. Specific uses are described for each of the 125 polymucleotides, based on which tissues they are most highly expressed in
                                             diagnosis: tissue, cancer; tumour; neurodegenerative discret; leukaemiu; developmental abnormality; foetal deficiency; blocd; allergy; renai; immune system; asthma: lymphocytic disease; brain; hepatic; lymphoma; inflaumation; ischaemic shock; Albeimer's disease; restenosis; AIDS; cognitive disorder; schizophrenia; prostate; obesity; osteoclast; thymus; osteoporosis; arthritis; testis; lung; thyroiditis; thyroid; digestion; endocrine; metabolism; regulation; malabsorption; gastritis; neoplasm.

The present sequence is the beta-amyloid peptide (BAP) binding protein-is (BBP3). It is an integral membrane protein, that traverse the membrane twice. It is related to G protein-coupled receptor (GPCP) protein superfamily. It interacts with G-alpha proteins and regulates the activity of G-protein signalling pathways. BBP genes are widely expressed in neuronal cells of nonhuman primate (MHP) brain and overexpressed in some tumours. It functions as a suppressor of apoptosis induction. BBP proteins are used as immunogens to raise antibodies, useful as proteins are used as antigens in solid phase assays. They are also useful as reagents to identify molecules which effect the interaction of BBP and a cloned protein, that are useful in the treatment or prevention of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   5

The GENSET sequences are useful for preparing a composition for treating GENSET-related disorders. They can also be used as markers for tissues in which the corresponding protein is preferentially expressed, as molecular weight markers on Southern gels, as chromosome markers or tags to identify chromosomes, and as reagents in assays to quantitatively determined levels of GENSET expression in biological samples.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               135 CTNYTA--HVSC----FPAPNITCKDSSGNETHFTGNEVGFFKPISCRNVNGYSYKVAVA 188

                                                                                                                                                                                                                                                                                                              The present sequence represents TANGO 223 polypoptide. The specification also describes a TANGO 201 polypeptide. These polypeptides are secreted or transmembrane proteins. Human TANGO 201 and 223 nucleic acids, proteins and their modulators are useful for treating proliferative disorders e.g. neoplasms or tumours, pancreatic disorders (e.g. pancreatitis), disorders of the adrenal cortex, adrenal medulia, thyroid gland (e.g. thyroiditis), goiter, Graves' disease, gastric placenteit of astrictis or tumours), placenteid disorders (e.g. pastrictis or tumours), placenteid disorders (e.g. pattendancous abortion), pulmonary disorders (e.g. attendancous abortion) attendancous abortion).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    brain (e.g. cerebral edema), cerebrovascular disease and to treat injury or trauma to the brain. They are also useful for treating hepatic disorders (e.g. jaundice, hepatitis, cirrhosis or malignant tumours), renal, testicular, intestinal disorders. TNGO 23 polynouclectides are also useful for treating lenkocytic disorders (e.g. leukocytosis and malignant lymphomas) and prostate disorders (e.g. inflammatory diseases, hyperplasia or tumours).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 muscle (e.g. muscular dystrophy), cardiovascular disorders (e.g. ischemic heart disease and congenital heart disease), disorders of the

The specification also describes a TANGO 201 polypeptide. These polypeptides are secreted or transmembrane proteins. Human TANGO 201 and 223 nucleic acids,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     brain (e.g. cerebral edema), cerebrovascular disease and to treat injury or trauma to the brain. They are also useful for treating hepatic disorders (e.g. jaundice, hepaticis, cirrhosis or malignant tumours), renal, testicular, intestinal disorders. TANGO 223 pclynucleotides are also useful for treating leukocytic disorders (e.g. leukopenias, leukocytosis and malignant lymphomas) and prostate disorders (e.g. inflammatory diseases, hyperplasia or tumours).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Novel nucleic acid molecule encoding secreted or transmembrane protein useful for identifying modulators and for diagnosing and treating pancreatic, cardiovascular, liver and pituitary disorders -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              disorders e.g. neoplasms or tumours, pancreatic disorders (e.g. pancreatitis), disorders of the adrenal cortex, adrenal medulla, thyroiditis), goiter, Graves' disease, gastric disorders (e.g. gastrits or tumours), placental disorders (e.g. placentitis or tumours), placental disorders (e.g. placentitis or spontaneous abortion), pulmonary disorders (e.g. placentitis or spontaneous abortion), pulmonary disorders (e.g. muscular dystrophy), cardiovascular disorders (e.g. ischemic heart disease and congenital heart disease), disorders of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            189 LSLFLGWLGADRFYLGYPALGLLKFCTVGFCGIGSLIDFILLISMQIVGPSDGSSYI 244

1: pirl: * 2: pir2: * 3: pir3: * 4: pir4: *

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Hypothetical protein; Transport; Amino-acid transport; Transmembrane;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            'Whole genome comparison of Mycobacterium tuberculosis clinical and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                laboratory strains...
Submitted (APR-2001) to the EMBL/GenBank/2DBJ databases.
FUNCTION: PROBABLE AMINO-ACID OR METABOLITE TRANSPORT PROTEIN...
-: SUBCELLULAR LOCATION: Integral membrane protein (Potential)...
-: SIMILARITY: Belongs to the amino acid permease family.
                                                                                                                                                                                                                                                                                                                                                                                                               Bacteria; Actinobacteria; Actinobacteridae; Actinomycetales; Corynebacterineae; Mycobacteriaceae; Mycobacterium:
                                                                                                                                                                                                                                                            15-JUL-1998 (Rel. 36, Created)
